## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 11, 13, 16, 17, 18, 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Harvey in view of Hodges and Cavalier et al. The patent to Harvey teaches structure substantially as claimed including a fixture for forming unit loads to be received on two or more loading ledges, which unit loads after forming are lifted from the fixture together with the loading ledges, wherein the fixture is to receive the loading ledges and the fixture has means to adapt the positions of the loading ledges depending on the size and form of the unit loads to be formed, the fixture has an approximate rectangular frame, formed of at least two parallel long struts(11) and at least two parallel short struts (12) at the end of the long struts, a further number of intermediate (12) short

struts are arranged between the long struts, transversal bars are arranged moveable on the long struts, with the ends of each transversal bar on each long strut, locking means, the only difference being that cups are not adjustably mounted on the bars and a unit load is not lifted from the fixture. . However, the patent to Hodges (30) teaches the use of providing cups to be old and the patent to Cavalier et al teaches the use of providing a "package load" lifted off from together.. It would have been obvious and well within the level of ordinary skill in the art at the time of the invention was made to modify the structure of Harvey to include adjustable cups, as taught by Hodges and such structure formed as a unit, as taught by Cavalier et al since such structures are conventional alternative structures used in the same intended purpose, thereby providing structure as claimed, as defined.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references to Sato et al, Stoddard et al , Ziemba, Farr, Lucas et al, Michaud et al, Trickett, Wullenweber, Glassmeyer, Sylvester et al, Shell, Carvin, Lair, Giesen, Courter teach structure similar to applicant's.
